News About the Environment

National Grid is proud to join with other industry leaders in providing you with the latest information to help you understand the industry and the environment and how they are affecting each other.

Our latest statement on climate change is available on our website. It outlines the supply of electricity and the use of gas to generate electricity. The statement also outlines the impact of climate change on the electricity and gas supply and the measures we are taking to address it.

For more information on climate change, please visit our website. We have a dedicated section on climate change which provides information on the latest developments in the industry.

Complete information is available in the New York State Public Service Commission brochure *Environmental Disclosure*. You can view a copy by visiting the Public Service Commission website at www.psc.state.ny.us.

Choosing an Energy Supplier: You can choose who supplies your energy. We make it easy to choose the energy supplier you want. National Grid will continue to deliver energy to you safely, efficiently and reliably. We will also continue to provide you with customer service, including emergency response and power restoration. National Grid is dedicated to creating an open energy market that lets you choose from a variety of competitive energy suppliers who may offer different prices and terms. For information on authorized energy suppliers and how to choose, please visit our website at www.nationalgridus.com/energychoice.

For Your Information

We want you to easily understand your bill, the terms we use and the charges that appear. Following is a brief explanation of items that appear on your bill, as well as payment programs and billing services we offer. If you have questions or want more detailed explanations, please visit our website at www.nationalgrid.com or call 1-800-842-4272.

Paying Your Bill

Payment Options

Direct Pay: If you choose National Grid will automatically withdraw your monthly bill payment from your checking or savings account. You will avoid the inconvenience of check writing, stamps, mailing and duplicates. Your service bill will indicate your energy usage and the date of your next automatic withdrawal.

By Mail: Send us your payment in the envelope provided with your bill. For your protection, please do not send cash. Put your 10-digit account number on your check or money order and include your bill stub. Please do not staple or paper clip your check to the stub.

In Person: Pay at an authorized payment location by cash or check. Please bring your bill with you. Most locations charge a fee for providing this service. For the payment locations nearest you, visit our website or contact us.

Online: Enroll online to receive and pay your bill online. The online function will begin with the next billing cycle following your enrollment.

Late Payment Charge: To avoid Late Payment Charges, your payment must be received by the date shown on the front of the bill.

Charges

Charges for electric or gas service are based on rates or prices approved by the New York State Public Service Commission (PSC). When changes in prices are approved by the PSC, information will be included with your bill. Complete price schedules are available on our web site or by contacting us.

Basic Service: A charge to cover costs for meter reading, billing, equipment and maintenance. This charge is the same regardless of how much energy is used during the billing period.

Tariff Surcharge: New York State and many local municipalities impose taxes on National Grid's revenue. These operating costs are recovered through a tariff surcharge applied to all rates and charges and may vary among taxing municipalities within the National Grid system area.

Sales Tax: In some areas National Grid is required to collect state and local sales taxes. Some school districts also impose taxes.

Billing & Metering Charges

Within the "Delivery Services" section of your bill charges for Billing & Metering are included in the Basic Service Charge.

Billing: A charge to cover the calculating and rendering of your bill.

Metering: A charge to cover the procurement, installation, maintenance and reading of the meter.

Energy Measurement Terms

kWh: The unit of electricity measured by your meter.

kWh is an abbreviation for kilowatt-hour, or 1,000 watt-hours of electricity use. One kWh will light a 100-watt bulb for 10 hours. The number of kWh is used to determine the electricity charges on your bill.

Meter Multiplier: Due to their design, some meters record a fraction of the total usage. The multiplier is used to convert the recorded meter reading on these types of meters to total actual consumption.

CCF: The unit of gas volume (100 cubic feet) as measured by your meter.

Therm: A unit of heat content equal to 100,000 British Thermal Units (BTU). A BTU represents the amount of heat required to raise the temperature of one pound of water by one degree Fahrenheit. The number of CCFs is multiplied by a conversion factor to determine the therms used. The number of therms is used to determine the gas charges on your bill.

Electric Service

Electric Service

Delivery: National Grid's charges for bringing electricity from your supplier to your premise, regardless of supplier.

Customer Service Credit: A credit applied for customers who choose an electricity supplier other than National Grid.

Delivery Adjustment: An adjustment for Standard Rate Service customers which provides partial financial protection against the fluctuation between actual cost and forecast cost of electricity supply, upon which rates are established. The Company does not earn a profit from the electricity supply that it obtains for its customers.

SEC/RPS: These charges reflect costs associated with mandated public policy programs—low income assistance, energy efficiency programs, and certain research and development programs including the advancement of renewable energy resources.

Transmission Revenue Adjustment: A rate mechanism that compares actual transmission service revenue received by the Company with the forecasted transmission service revenue used, in part, to develop electric delivery prices. As a result of the monthly comparison, a difference determined in excess of the forecasted transmission revenue is refunded to customers, and a difference determined to be less than the transmission revenue is collected from customers.

Electricity Supply: The market price of electricity supply used during the billing period. If you choose an alternate supplier, the price will be what you agree upon with that supplier.

Gas Service

National Grid Gas Delivery Service Charge:

National Grid's charges for transporting gas across its distribution system to your premise, regardless of supplier.

Adjustment for changes from normal weather: A mechanism that adjusts customers' gas bills due to variations from normal weather during the heating months, October through May.

Gas Supply: A charge to reflect the Company's actual cost to purchase gas from suppliers and transport the gas to the Company's distribution system. If you choose an alternate supplier, the price will be what you agree upon with that supplier.

Merchant Function Charge: A charge to reflect the costs the Company incurs associated with the procurement of gas supplies. This charge will not be billed to you by the Company if you choose an alternate supplier.

Import Tax: National Grid is required to collect a state tax on natural gas imported but not sold by National Grid. Only customers buying gas from suppliers other than National Grid are subject to an import tax.

Estimating Your Usage

We will estimate your usage any time we are unable to obtain a reading. We base our estimate, generally, on your past usage, taking current weather conditions into account. Because our meters keep a continuous record of usage, any difference between estimated readings and actual usage will be reconciled with the next meter reading. To avoid estimated readings, you can take your own reading on or just before the scheduled date shown on your bill. Visit our website at www.nationalgrid.com, and give us the reading. Or, call it in at 1-888-932-0301.

Payment Programs

National Grid has a number of payment programs and billing services to meet the varied needs of our customers:

- **Budget Plan:** Helps customers avoid high seasonal payments by spreading the cost for utility service over the entire year.
- **Bill Extender:** Gives customers time to pay their monthly bill.
- **Deferred Payment:** Customers who have and cannot pay it.
- **Hospitalized:** Customers temporarily unable to extend payment days from the

News About the Environment

National Grid provides you with periodic environmental information to help you know how electricity is generated and how producing electricity affects the environment.

What if you could know what fuels the supplier you purchase your electricity from use to generate electricity, the air emissions that resulted and how those emissions compare to state level averages. Below information on sulfur dioxide and nitrogen oxides both of which are air pollutants that contribute to global warming and acid rain, and carbon dioxide, which contributes to global climate change.

Depending on fuel sources, size and location, the generation of electricity may also result in other public health, environmental and socio-economic impacts not discussed here.

Complete information is available in the New York State Public Service Commission brochure *Environmental Disclosure*. You can view it online by visiting the Public Service Commission web page at www.dps.state.ny.us.
